

## DAF Wastewater Treatment System

### Case Study Details

Kraft Foods (now Mondelez), required a treatment system to reduce the wastewater load and meet city sewer discharge limits in their effluent.

H2Flow provided a physical/chemical treatment system based on dissolved air floatation. The system flowrate is designed for 10 m<sup>3</sup>/hr.

H2flow provided a complete system including all pumps, equalization and sludge tanks, DAF unit, all instrumentation and controls plus central control panel.
